at line 29 of page 4 of the specification after "patient's mouth" and insert – and the substance being spray applied to form the layer buildup is a polymerizable wax-like dental material having up to 70% by weight of at least one of a polymerizable monomer and oligomer, from 0.01 to 10% by weight of a polymerization initiator, and at least 20% by weight of a mixture having a selected one of wax-like and a flowable monomer and a color pigment, the dental material has the property that one of its physical condition and its viscosity changes within a relatively small range of temperature. Note the % by weight of a polymerization initiator in the polymerizable wax-like dental material may also range from 0.5 to 5% or 0.5 to 2% --.

at line 17 of page 4 of the specification after "monomer." insert -- The spray applied material is a selected one of a material having a wax-like polymerizable substance having an ester of a carbon acid and a polymerizable alcohol and a material having an ester of an alcohol and a polymerizable carbon acid derivative of between about 20% to 99.99% by weight of the material. –
